##
## Residual standard error: 0.1321 on 774 degrees of freedom
## Multiple R-squared:  0.6937, Adjusted R-squared:  0.6838
## F-statistic: 70.13 on 25 and 774 DF,  p-value: < 2.2e-16
```

Adjusted R-squared of best model from forward selection = 0.6838 After comparing, to the best model derived from backward selection, this model has a smaller adjusted R-squared. Consequently, I fitted this model (r1) as m1 above, and derived its MSE.

BACKWARD SELECTION

## Residual standard error: 0.132 on 774 degrees of freedom
## Multiple R-squared:  0.6943, Adjusted R-squared:  0.6844
## F-statistic: 70.3 on 25 and 774 DF, p-value: < 2.2e-16

```

The Adjusted R-squared is 0.6844, which is greater than the estimate from the pervious model using forward selectino. Consequently, I fitted the previous model to calculate the MSE.
